

Mule On-Demand

XTIVIA is changing the way IT organizations address the problem of data disaggregation and accessibility. We offer solutions that enable organizations to transform themselves by making it easier for IT organizations to connect any application, data source, or API – in the cloud, on-premises, or in a hybrid environment – to resolve their business and integration issues and address the demand to increase productivity. We help IT leaders meet the demand to connect data that can be used to take advantage of disrupters and create transformation opportunities for their organization.

MULE SERVICE ON-DEMAND

Mule Service On-Demand is a unique offering provided by XTIVIA to service an organization’s immediate MuleSoft needs. Mule Service On-Demand is a “pay-as-you-use” model that can be consumed on a per-hour basis. This is an ideal model to provide an onsite or offsite MuleSoft Certified Professional for your company’s Integration needs that require some flexibility in usage.

The MuleSoft Platform Integration Services that XTIVIA supports include API-Led Connectivity, Microservice Integrations, Application Integrations, Data Integration, and Service Development. The table below details each of the services.

| <h4>API-led Connectivity</h4> | <h4>Microservice Integration</h4> | <h4>Data Integration</h4> |
| <ul style="list-style-type: none"> • System APIs • Process/Business APIs • Experience APIs • Microservices Approach | <ul style="list-style-type: none"> • Service Mediation • Message Routing • Data Transformation • Service Orchestration | <ul style="list-style-type: none"> • Querying • Normalizing • Data Transformation |
| <h4>Application Integration</h4> | | <h4>Service Development</h4> |
| <ul style="list-style-type: none"> • Open, standards-based integration • Technology & Application adapters • Reliable messaging • Service creation and consumption • Multiple document and protocol support • Mapping and transformation | | <ul style="list-style-type: none"> • Service Creation and Hosting • Message Consumption • Event Consumption • File Processing |

HOW DOES IT WORK?

Mule Service On-Demand is designed to be customizable, so you pay only for the support/development services your business needs. First, we collaborate with your team to estimate your MuleSoft needs over a 12-month period, then calculate the average monthly cost and bill you for that amount. You have up to 12 months to use the hours.

On-Demand Services

Need expert or additional resources?

- 24x7 On-Call Services
- Access to Mule Service OnDemand Client Web Portal
- You define the Platform Integration needs

Custom Services

Unique Business Needs?

- Define the MuleSoft services you require
- Choose the duration of the MuleSoft Professional needed
- Define the roles and responsibilities for your Onsite/Offsite MuleSoft Professional

XTIVIA MULESOFT INTEGRATION CAPABILITIES

MuleSoft makes transformation happen by making data or devices pluggable and reusable in an application network creating a better experience and driving efficiency.

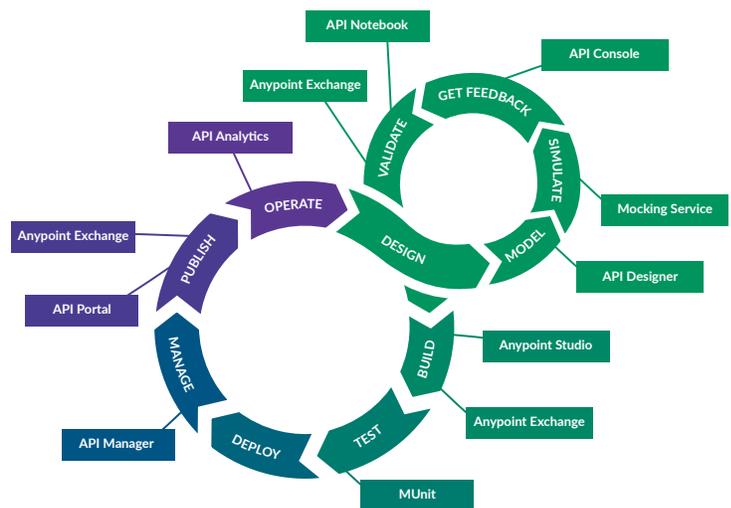

As a MuleSoft Partner, XTIVIA provides a full range of MuleSoft implementation services including planning and analysis, software customization, data imports, system integration, installation, training, and support. Through our proven and detailed approach with MuleSoft Implementations, our clients typically experience a number of benefits that help them differentiate their products and/or services.

- MuleSoft Certified Professionals
- Establish Competency Center
- Managed Services and Support
- Customization of Standards, Best Practices, and Design Patterns
- Strategic Architecture and Roadmap development
- Microservices Design and Implementation
- Test Strategy Customization and API Testing Services

XTIVIA MULESOFT ANYPOINT PLATFORM DEVELOPMENT APPROACH

XTIVIA's clients benefit from a centralized, secure, and standards-based approach to data and application integration. MuleSoft AnyPoint Platform tools can make the right data available to the right applications, processes, and people in a secure and reliable manner. The following diagram illustrates the value that MuleSoft can provide.

API-led integration strategy is the introduction of Microservices. Microservices are the evolution of best-practice architectural principles that shape the delivery of solutions to the business in the form of services. They offer the potential to break down the coupling between business channels and the backend systems of record that cater to them. A microservice architecture aligns with the business in such a way that changes to your business can be dealt with in an agile fashion. The more granular the APIs, the more likely to find more reuse opportunities.

XTIVIA's Mule On-Demand Services offer premiere support around the clock. Reach out today and an XTIVIA MuleSoft professional will help you find the right balance for your API architecture at the right cost.
